Dear Hiring Manager,

I am a Senior Software Engineer with 7+ years of experience building **financial data platforms, high-performance APIs, and AI-powered analytics systems**. My expertise lies in **Python, SQL, and distributed systems**, with a track record of scaling pipelines, automating reconciliation/reporting, and driving measurable business outcomes across fintech, e-commerce, and analytics domains.

Key Highlights

- **Tech Stack (7+ yrs):** Advanced **Python** (7+), FastAPI/Django/Flask (6), JavaScript/React/Next.js (5–6), Node.js/TypeScript (4), Go/Java/C++ (3).
- **Systems & Architecture (6 yrs):** Designed and scaled **microservices, distributed systems, REST/GraphQL/gRPC APIs**, with strong focus on financial data pipelines, ETL/ELT, and reconciliation workflows.
- **Databases (6 yrs):** Hands-on with **Postgres/MySQL/SQL Server/Redis (6)**; experienced with **Cassandra/DynamoDB/Elasticsearch (4–5)**; exposure to **Neo4j/Influx/Timescale (3)** for analytics and time-series modeling.
- **Messaging & Streaming (5+ yrs):** Built high-throughput data ingestion pipelines using **Kafka, RabbitMQ, AWS SQS, GCP Pub/Sub**.
- **Cloud & DevOps (6 yrs):** Deployed and scaled services on **AWS/GCP**, containerized with **Docker/Kubernetes**, with IaC using **Terraform/Ansible**, Helm, and CI/CD pipelines.
- **Monitoring & Observability (5+ yrs):** Implemented enterprise-grade monitoring with **Prometheus, Grafana, ELK, Jaeger, OpenTelemetry, NewRelic/Datadog**, enabling anomaly detection and real-time reporting.
- **AI/ML & Analytics (3–4 yrs):** Developed **RAG pipelines, anomaly detection, and predictive reporting** using **Elasticsearch, Vector DBs, PySpark**, and LLM integrations.
- **Leadership & Ownership (5+ yrs):** Led cross-functional teams, mentored engineers, and delivered large-scale projects from design to production in **FinTech and analytics domains**.

Achievements

- **NAV Backoffice:** Built **automated reconciliation and financial reporting pipelines**; reduced Golang API p99 latency from **40s → 50ms**; cut ETL job runtime from **200s → 9s (22x speedup)**; resolved critical memory leaks in FastAPI; and integrated full-stack observability with Grafana, Jaeger, and Kibana.
- **ShyftLabs:** Built **multi-tenant ETL pipelines** handling billions of logs; migrated APIs to TDD with **98% coverage** (resolving 90+ bugs); delivered large-scale **POS integration system** across 2600+ US retail stores using Next.js + FastAPI.
- **Ornaz:** Led e-commerce platform migration from **monolith → microservices (99.99% uptime)**; achieved Lighthouse **100/100** and <500ms load times; built **real-time campaign & analytics systems** improving conversion funnels; engineered **AR/3D trial rooms** boosting engagement by 40%+ and sales by 25–30%.

I am now looking to apply this experience in a **FinTech environment**, where I can expand my exposure to **AI/ML-powered financial intelligence, predictive reporting, and anomaly detection pipelines**. My goal is to build systems that not only perform at scale but also deliver actionable insights to decision-makers.

I would welcome the opportunity to discuss how my skills in **financial data engineering, scalable pipelines, and AI-driven analytics** can directly contribute to your company's mission.

Best regards,
Ashutosh Verma
